EDUCATION

Nitte Meenakshi Institute of Technology

B.E. in Computer Science and Engineering | CGPA: 8.67 / 10.00

Bengaluru, India

Dec. 2022 – May 2026

EXPERIENCE

Arvasit Technolabs Pvt. Ltd.

Software Engineer Intern

Bengaluru, India

Feb. 2026 – Mar. 2026

- Architected a distributed order-processing platform in **Node.js** comprising 3 independent microservices (Order, Payment, Inventory) covering 3 core e-commerce workflows — order creation, payment processing, and inventory reservation — across fully decoupled service boundaries.
- Engineered an **Apache Kafka** event-driven messaging layer with purpose-built producers and consumers per domain, enabling asynchronous orchestration of the complete order lifecycle and eliminating synchronous coupling between services.
- Implemented **gRPC** with Protocol Buffers for typed, low-latency inter-service communication, enforcing strict schema contracts and enabling efficient binary serialization across all 3 microservice boundaries.
- Containerized 100% of the microservices stack using **Docker**, achieving consistent, reproducible deployments and validating end-to-end order status tracking workflows across the full distributed system.

PROJECTS

AI-Powered Meeting Intelligence Platform | *Python, Faster-Whisper, Speech Diarization, NLP, VAD, ML*

- Developed an end-to-end meeting analytics platform using Faster-Whisper and clustering-based speech diarization, generating accurate speaker-labelled transcripts, automated meeting summaries, and 10+ meeting analytics KPIs from multi-speaker conversations.
- Integrated **Voice Activity Detection (VAD)** to isolate speech segments, feeding a downstream **NLP** pipeline that automatically extracts meeting summaries, action items, and key decisions.
- Computed 10+ meeting analytics KPIs (talk-time ratio, speaker dominance) and generated 9+ analytical visualizations, transforming raw audio into structured, actionable meeting intelligence.

Event-Driven Order Processing Platform | *Node.js, Apache Kafka, Docker, gRPC*

- Built 3 independently deployable microservices wired via **Kafka** topics and consumer groups, simulating a production-grade e-commerce order lifecycle with full event-driven state transitions across service boundaries.
- Designed Kafka producer-consumer contracts per service domain and **gRPC** service definitions with Protocol Buffers, enforcing typed, versioned inter-service communication across all 3 microservices.
- Containerized 100% of services with **Docker**, enabling single-command multi-service orchestration and reproducible local development environments.

Cloud-Based Media Management Platform | *Node.js, Express.js, MongoDB, Multer, Cloudinary, Tailwind CSS*

- Engineered a full-stack media management system supporting 1,000+ image uploads and files up to 100 MB, backed by **Cloudinary** for cloud storage and **MongoDB** for structured metadata persistence.
- Implemented server-side upload pipeline using **Multer** with automatic temporary file cleanup post-transfer, reducing disk usage overhead and preventing storage leaks.
- Deployed production instance on **Render** with a responsive **Tailwind CSS** frontend, delivering a live, publicly accessible media management experience.

TECHNICAL SKILLS

Languages: C++, Java, JavaScript, Python, SQL, HTML, CSS

Backend: Node.js, Express.js, REST APIs, gRPC

Databases & Distributed Systems: MongoDB, PostgreSQL, MySQL, Apache Kafka, Event-Driven Architecture, Microservices

Cloud & DevOps: Docker, Cloudinary, Render

AI / ML: Faster-Whisper, Speech Diarization, Voice Activity Detection, NLP

Tools & Coursework: Git, GitHub, Postman, VS Code | DSA, OOP, Computer Networks, DBMS, OS

ACHIEVEMENTS

- Solved 600+ programming problems with coding activity LeetCode, CodeChef, Codeforces, and AtCoder.
- LeetCode Contest Rating: 1422+ | CodeChef Rating: 1247+ | Codeforces Rating: 993+ | 5-Star C++ Programmer on HackerRank.
